

- Collagenase in Dupuytren is a reliable non-surgical treatment for contractures.
- In severe Dupuytren disease, multiple digits and joints are frequently involved.
- Collagenase injections are helpful in mild, but also in severe Dupuytren disease.
- Repeat single site collagenase injections cause longer recovery time, higher cost and burden.
- Simultaneous collagenase treatment for multiple digits with a more flexible treatment regimen is likely to improve hand function more accurately in severe Dupuytren disease.
